# Angular JS Laboratory Manual

21CSL581

V-Semester

**All Programs developed by Prof. Sandeep Chavan/
Dr. Vidya Dandagi Dept.of CSE, JCE, Belagavi**

ANGULAR JS			
Course Code	**21CSL581**	CIE Marks	50
Teaching Hours/Week (L:T:P: S)	0:0:2:0	SEE Marks	50
Credits	01	Total marks	100
Examination type (SEE)	PRACTICAL		

Course objectives:
- To learn the basics of Angular JS framework.
- To understand the Angular JS Modules, Forms, inputs, expression, data bindings and Filters
- To gain experience of modern tool usage (VS Code, Atom or any other] in developing Web applications

Sl.NO	Experiments
1	Develop Angular JS program that allows user to input their first name and last name and display their full name. **Note**: The default values for first name and last name may be included in the program.
2	Develop an Angular JS application that displays a list of shopping items. Allow users to add and remove items from the list using directives and controllers. **Note**: The default values of items may be included in the program.
3	Develop a simple Angular JS calculator application that can perform basic mathematical operations (addition, subtraction, multiplication, division) based on user input.
4	Write an Angular JS application that can calculate factorial and compute square based on given user input.
5	Develop AngularJS application that displays a details of students and their CGPA. Allow users to read the number of students and display the count. **Note**: Student details may be included in the program.
6	Develop an AngularJS program to create a simple to-do list application. Allow users to add, edit, and delete tasks. **Note**: The default values for tasks may be included in the program.
7	Write an AngularJS program to create a simple CRUD application (Create, Read, Update, and Delete) for managing users.
8	Develop AngularJS program to create a login form, with validation for the username and password fields.
9	Create an AngularJS application that displays a list of employees and their salaries. Allow users to search for employees by name and salary. **Note**: Employee details may be included in the program.
10	Create AngularJS application that allows users to maintain a collection of items. The application should display the current total number of items, and this count should automatically update as items are added or removed. Users should be able to add items to the collection and remove them as needed. **Note**: The default values for items may be included in the program.
11	Create AngularJS application to convert student details to Uppercase using angular filters. **Note**: The default details of students may be included in the program.
12	Create an AngularJS application that displays the date by using date filter parameters

NOTE 1: Sample Programs are given at the end for the students to practice

1. Develop Angular JS program that allows user to input their first name and last name and display their full name. **Note**: The default values for first name and last name may be included in the program.

```html
<!DOCTYPE html>
<html>
<title>
    Angular JS Full Name Pgm
</title>
<head>
    <script type="text/javascript"
    src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
</script>
<script>
    var app=angular.module("myApp",[]);
    app.controller("myCntrl",function($scope){
        $scope.firstName="Harish Kumar"
        $scope.lastName="B T"
    });
</script>
</head>
<body ng-app="myApp">
    <h2>Anjular JS Application to Display Full Name</h2>
    <div ng-controller="myCntrl">
        Enter First Name: <input type="text" ng-model="firstName"><br/>
        Enter Last Name: <input type="text" ng-model="lastName"><br/>
        Your Full Name: {{firstName +" "+ lastName}}
    </div>
</body>
</html>
```
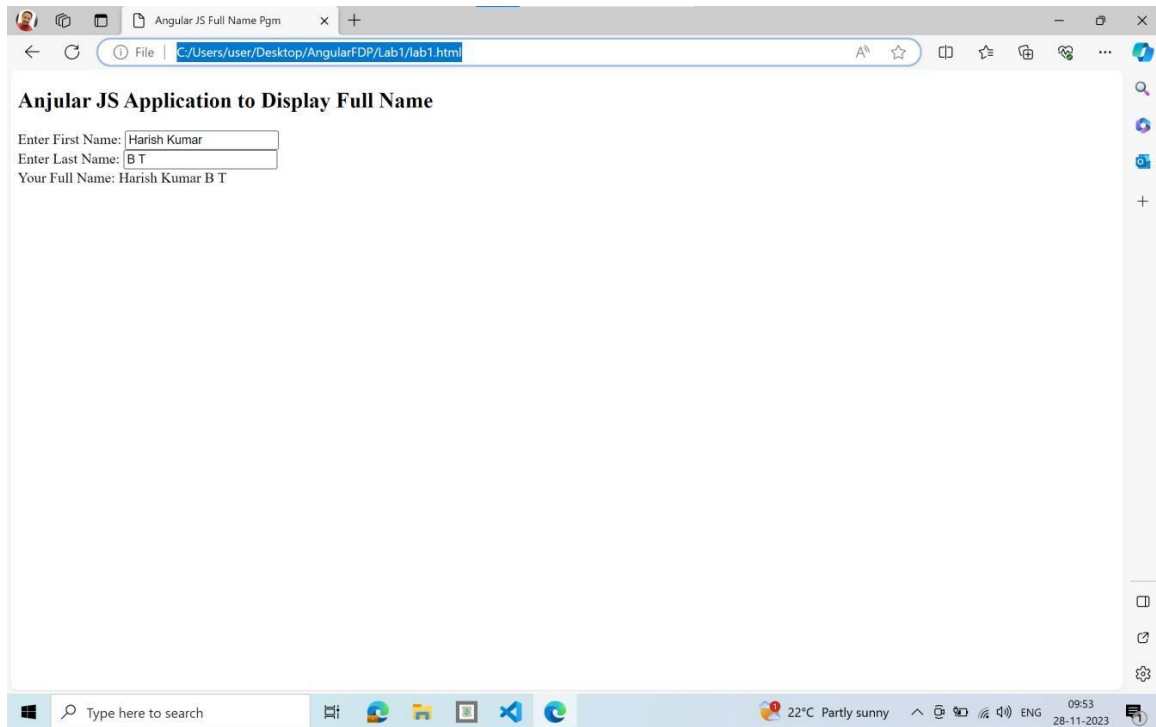

Department of Computer Science & Engg., JCE

Output:

2. Develop an Angular JS application that displays a list of shopping items. Allow users to add and remove items from the list using directives and controllers. Note: The default values of items may be included in the program.

```html
<!DOCTYPE html>
<html>
<title>
    Shopping Items Application
</title>
<head>
    <script type="text/javascript"
    src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
</script>
<script>
    var app=angular.module("myApp",[]);
    app.controller("myCntrl",function($scope){
    $scope.shoppingItems=['Apple','Mango','Banana','Grapes']
    $scope.addItem=function(){
    if($scope.newItem && $scope.shoppingItems.indexOf($scope.newItem)==-1)
        {
            $scope.shoppingItems.push($scope.newItem)
            $scope.newItem=""
        }
        else
        {
            if($scope.newItem)
            alert("This item is already there in the shopping list")
            else
            alert("Please enter an item to add")
        }
    }

    $scope.removeItem=function(){
        //console.log("function called")
        if($scope.shoppingItems.indexOf($scope.selectItem)==-1)
        {
            alert("Please select an item to remove")
        }
        else{
            var index=$scope.shoppingItems.indexOf($scope.selectItem)
            $scope.shoppingItems.splice(index,1)
            $scope.selectItem=""
        }
    }
    });
</script>
```

Department of Computer Science & Engg., JCE

```html
</head>
<body ng-app="myApp">
<div ng-controller="myCntrl">
   <h2>Shopping Application</h2>
   <h4>List of Shopping Items</h4>
   <table border="1">
     <tr>
       <th>SLNO</th>
       <th>Item</th>
     </tr>
     <tr ng-repeat="items in shoppingItems">
       <td>{{$index+1}}</td>
       <td>{{items}}</td>
     </tr>
   </table>
   <br/>
   <div>
   Enter an Item to Add: <input type="text" ng-model="newItem">
   <button ng-click="addItem()">Add Item</button>
</div>

<div>
 Select an Item to Remove:
 <select ng-model="selectItem" ng-options="item for item in shoppingItems"></select>
   <button ng-click="removeItem()">Remove Item</button>
</div>
</div>
</body>
</html>
```
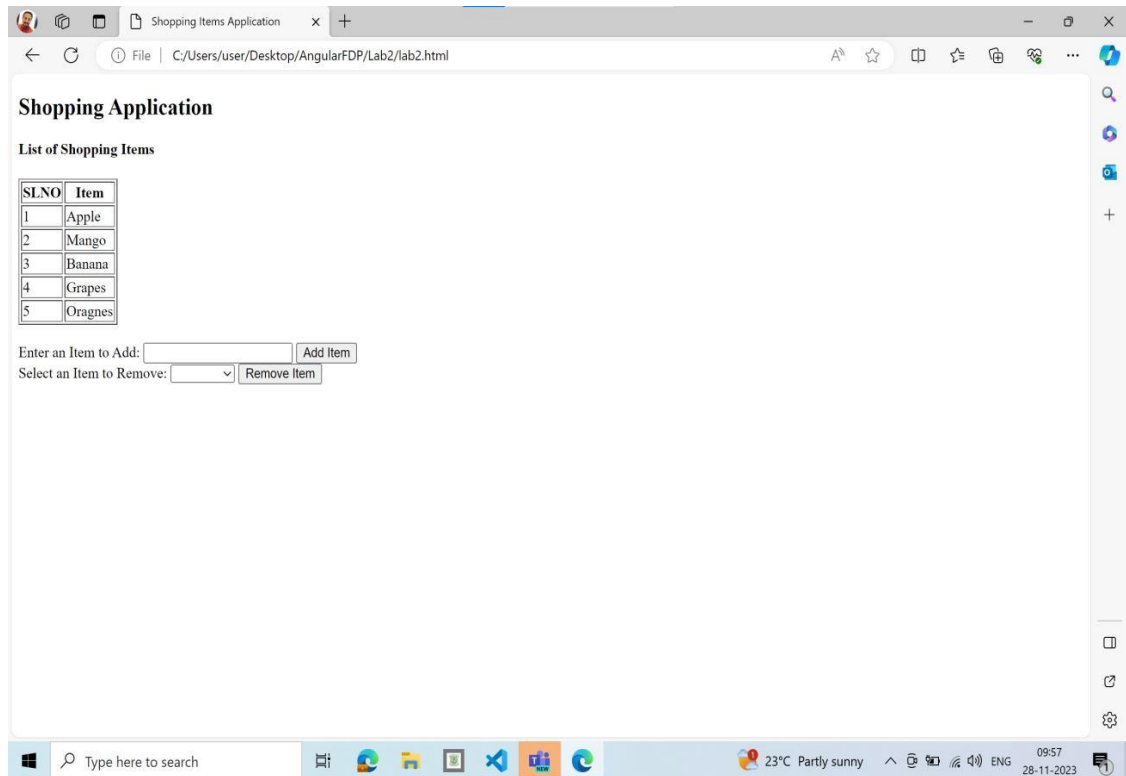

Department of Computer Science & Engg., JCE

Output:

3. Develop a simple Angular JS calculator application that can perform basic mathematical operations (addition, subtraction, multiplication, division) based on user input.

```html
<!DOCTYPE html>
<html>
<title>
    AJS Simple Calculator
</title>
<head>
<script type="text/javascript"
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
</script>
<script>
var app=angular.module("calcApp",[]);
 app.controller("calcCntrl",function($scope)
 {
        $scope.num1=0
        $scope.num2=0
        $scope.result=0
        $scope.operator="add"

        $scope.compute=function(){

            switch($scope.operator){
                case 'add': $scope.result=$scope.num1 + $scope.num2

                            break
                case 'sub': $scope.result=$scope.num1 - $scope.num2

                            break
                case 'mul': $scope.result=$scope.num1 * $scope.num2
                            break
                case 'div': if($scope.num2==0){
                            alert("Divide by zero error")
                            }
                            else{
                              $scope.result=$scope.num1/$scope.num2
                            }}}
 });

</script>
</head>
<body ng-app="calcApp">
    <h1>Angular JS Simple Calculator</h1>

    Enter the Number: <input type="number" ng-model="num">
    <button ng-click="factorial()">Compute Factorial</button>

    <button ng-click="square()">Compute Square</button>
```
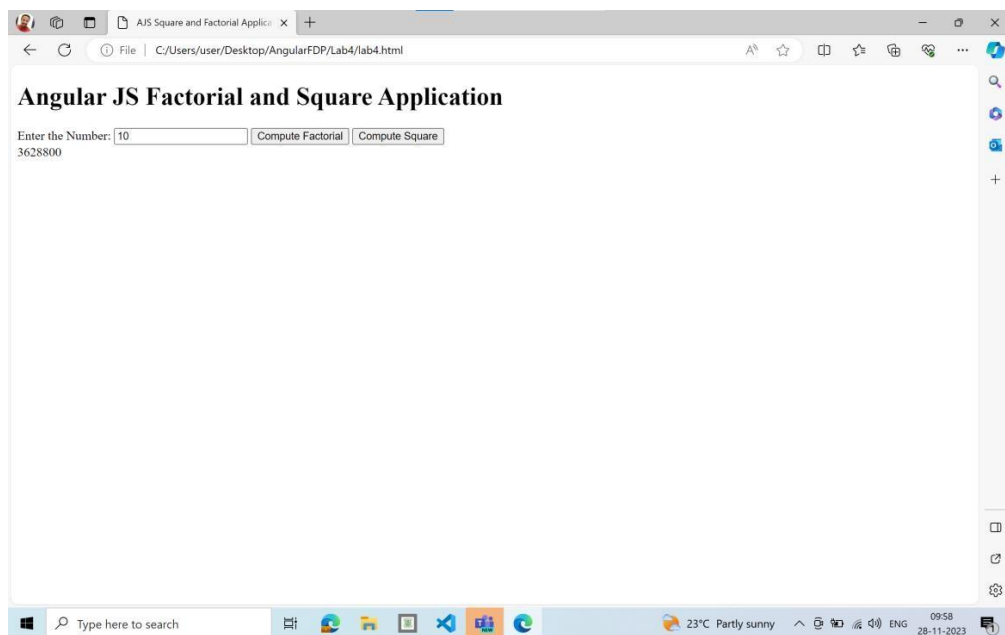

Department of Computer Science & Engg., JCE

```
        <br/>

    {{result}}

  </div>
  </body>
  </html>
```

Output:

Department of Computer Science & Engg., JCE

5. Develop AngularJS application that displays a details of students and their CGPA. Allow users to read the number of students and display the count. Note: Student details may be included in the program.

```html
<!DOCTYPE html>
<html>
    <title>Student Details Application</title>
    <head>
    <script type="text/javascript"
 src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
    </script>
    <script>
        var app=angular.module("studDetailsApp",[]);
        app.controller("studDetailsAppCntrl",function($scope){
            $scope.studData=[]

            $scope.generateData=function()
            {
                $scope.studData=[]
                for(var i=1;i<=$scope.num;i++)
                {
                    var stud={
                        "SLNO":i,
                        "NAME":'Student-'+i,
                        "CGPA":(Math.random()*10+1).toFixed(2)
                    }
                    $scope.studData.push(stud)
                }
            }
        });
    </script>
    </head>
    <body ng-app="studDetailsApp">
        <h1>Student Details Application</h1>
        <div ng-controller="studDetailsAppCntrl">
            Enter the Number of Students to Generate the Data:
          <input type="number" ng-model="num">
          <button ng-click="generateData()">Generate</button>
          <br/>
          <table border="1" ng-show="studData.length>0">
              <tr>
                  <th>SLNO</th>
                  <th>NAME</th>
                  <th>CGPA</th>
              </tr>
              <tr ng-repeat="student in studData">

                  <td>{{student.SLNO}}</td>
```
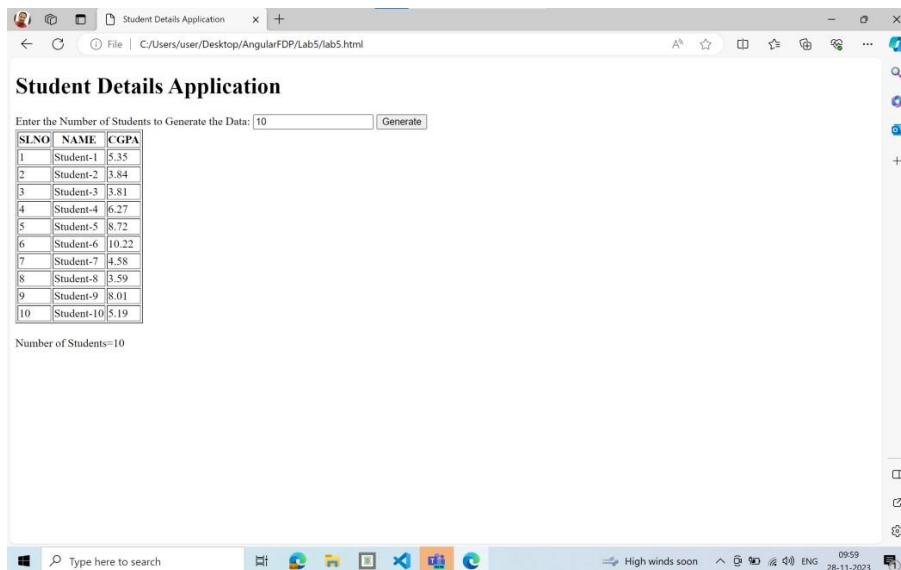

Department of Computer Science & Engg., JCE

```
                    <td>{{student.NAME}}</td>
                    <td>{{student.CGPA}}</td>
                </tr>
            </table>
            <br/>
            Number of Students={{studData.length}}
        </div>
    </body>
</html>
```

Output:

Department of Computer Science & Engg., JCE

6. Develop an AngularJS program to create a simple to-do list application. Allow users to add, edit, and delete tasks. Note: The default values for tasks may be included in the program.

```html
<!DOCTYPE html>
<html>
    <title>TO DO Application</title>
    <head>
        <script type="text/javascript"
  src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
        </script>

        <script>
            var app=angular.module("toDoApp",[]);
            app.controller("toDoAppCntrl",function($scope){
        $scope.tasks=[
        {'TITLE':'Task-1','COMPLETED':true,'EDITING':false},
        {'TITLE':'Task-2','COMPLETED':false,'EDITING':false},
        {'TITLE':'Task-3','COMPLETED':false,'EDITING':false}
                ]

                $scope.addTask=function(){
                    if($scope.newTask)
                    {
                    var t={
                        'TITLE':$scope.newTask,
                        'COMPLETED':false,
                        'EDITING':false
                    }

                    $scope.tasks.push(t)
                }
                else{
                    alert("Please enter the task to add")
                }
                }

                $scope.editTask=function(task)
                {
                    task.EDITING=true
                }

                $scope.turnOffEditing=function(task){
                    task.EDITING=false
                }

                $scope.deleteTask=function(task)

                {
```

```
                        var index=$scope.tasks.indexOf(task)
                          $scope.tasks.splice(index,1)
                      }

              });
         </script>
     </head>

     <body ng-app="toDoApp">
         <h1>TO DO APPLICATION</h1>
         <div ng-controller="toDoAppCntrl">
             Enter the name of the Task:
           <input type="text" ng-model="newTask">
           <button ng-click="addTask()">Add Task</button>
           <br/>
           <br/>
           <table border="1">
               <tr>
                   <th>SLNO</th>
                   <th>Status</th>
                   <th>Task</th>
                   <th>Edit</th>
                   <th>Delete</th>
               </tr>
               <tr ng-repeat="task in tasks">
                   <td>{{$index+1}}</td>
                   <td>
                     <input type="checkbox" ng-model="task.COMPLETED">
                     </td>

           </table>
           </div>
     </body>
   </html>
```
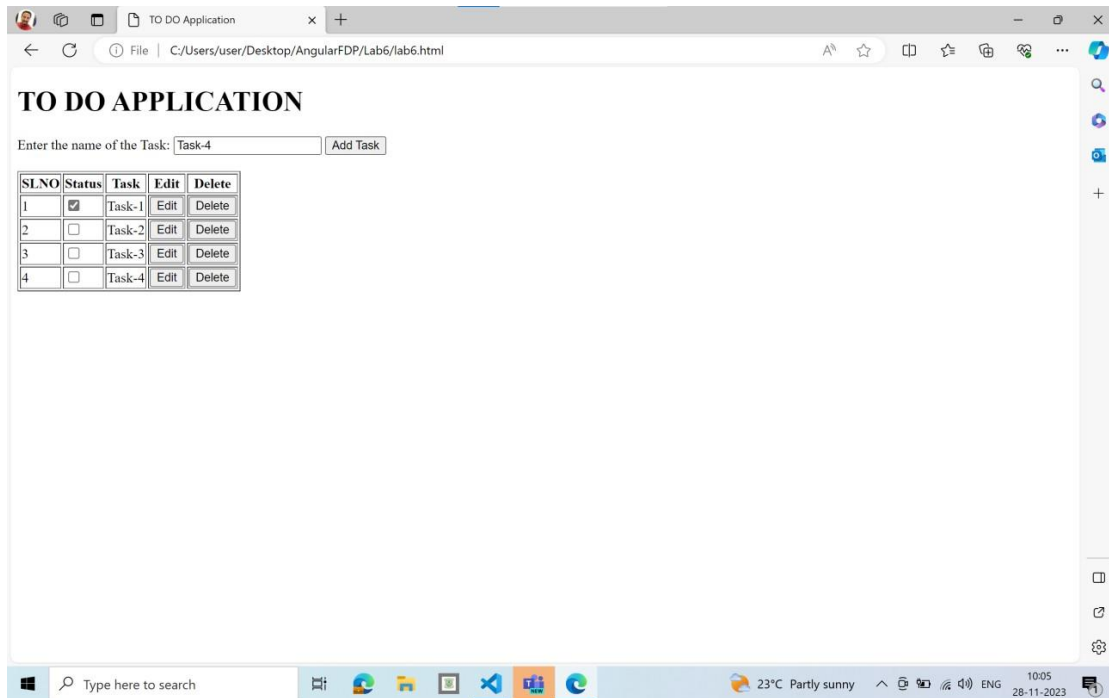

Output:

Department of Computer Science & Engg., JCE

7. Write an AngularJS program to create a simple CRUD application (Create, Read, Update, and Delete) for managing users.

```html
<!DOCTYPE html>
<html>
    <title>USER MANAGEMENT APPLICATION</title>
    <head>
        <script type="text/javascript"
  src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
        </script>

        <script>
            var app=angular.module("userMgmtApp",[]);
            app.controller("userMgmtAppCntrl",function($scope){
                $scope.users=[
{'name':"Dr.Vidya", 'email':'vidya.cse82@gmail.com','editing':false},
{'name':'ABC','email':'abc@gmail.com','editing':false},
  {'name':'XYZ','email':'xyz@gmail.com','editing':false}
                ]

                $scope.createUser=function()
                {

                    if($scope.newUserName && $scope.newUserEmail)
                    {
                    var u={
                        'name':$scope.newUserName,
                        'email':$scope.newUserEmail,
                        'editing':false
                    }

                    $scope.users.push(u)
                    $scope.newUserName=''
                    $scope.newUserEmail=''
                    }
                    else{
                        alert("Please provide the user name and email id")
                    }

                }

                $scope.readUser=function(user)
                {
                    user.editing=true
                }
```

```
                        $scope.updateUser=function(user){
                        user.editing=false
                }

                        $scope.deleteUser=function(user)
                        {

                                var yes=confirm("Are you sure you want to delete")
                                if(yes==true)
                                {
                                var index=$scope.users.indexOf(user)

Department of Computer Science & Engg., JCE

10. Create AngularJS application that allows users to maintain a collection of items. The application should display the current total number of items, and this count should automatically update as items are added or removed. Users should be able to add items to the collection and remove them as needed.
Note: The default values for items may be included in the program.

```html
<!DOCTYPE html>
<html>
    <title>Item Management Application</title>
    <head>
        <script type="text/javascript"
    src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
        </script>

        <script>
            var app=angular.module("itemMgmtApp",[]);
            app.controller("itemMgmtAppCntrl",function($scope){
                $scope.itemList=['Pen','Pencil','Eraser','Book']

                $scope.addItem=function()
                {
                    if($scope.newItem)
                    {
                        if($scope.itemList.indexOf($scope.newItem)==-1)
                        {
                            $scope.itemList.push($scope.newItem)
                        }
                        else{
                    alert('This item is already there in the item collection')
                        }
                    }
                    else{
                        alert('Please Enter the item to add')
                    }
                }

                $scope.removeItem=function(item)
                {
                    var yes=confirm("Are you sure you want to delete "+item)
                    if(yes==true)
                    {
                        var index=$scope.itemList.indexOf(item)
                        $scope.itemList.splice(index,1)
                    }

                }
```

6. Example on ng-options

```html
<!DOCTYPE html>

<html>

<title> Demo on Using the ng-options to fill the dropdown list from the list
of values</title>
<head>
    <script type="text/javascript"
    src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js
">
</script>

<script>
    var app=angular.module("myApp",[]);

    app.controller("myCntrl",function($scope){
        $scope.myList=['Apple','Mango','Banana','Orange']
    });
</script>
</head>
<body ng-app="myApp">

    <div ng-controller="myCntrl">
        List of Fruits: <select ng-model="selectFruit" ng-options="fruit for
fruit in myList"></select>

    </div>
</body>
</html>
```

Department of Computer Science & Engg., JCE

7. Example on ng-repeat

```html
<!DOCTYPE html>

<html>

<title>
    Demo on using ng-repeat
</title>

<head>
    <script type="text/javascript"
    src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js
">
</script>

<script>
    var app=angular.module("myApp",[]);

    app.controller("myCntrl",function($scope){
        $scope.myList=['Cow','Lion','Tiger','Deer','Sheep']

    });
</script>
</head>

<body ng-app="myApp">

    <div ng-controller="myCntrl">

        <ul>
            <li ng-repeat="animal in myList">{{animal}}</li>
        </ul>
    </div>
</body>
</html>
```

Department of Computer Science & Engg., JCE

8. Example on ng-show

```html
<!DOCTYPE html>

<html>
    <title>
        Demo pgm on using ng-show directive
    </title>

    <head>
        <script type="text/javascript"
 src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
        </script>

        <script>

    var app=angular.module("myApp",[]);
    app.controller("myCntrl",function($scope){
        $scope.display=true;
    });
        </script>
        </head>

        <body ng-app="myApp">
            <div ng-controller="myCntrl">
                <li ng-show="display">Harish</li>
            </div>
        </body>
    </html>
```

Department of Computer Science & Engg., JCE

9. Example on random number generation

```
<!DOCTYPE html>
<html>
    <title>Random Number Generation Demo</title>
    <head>
    <script type="text/javascript"
  src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"
>
    </script>

    <script>

    var app=angular.module("myApp",[]);
    app.controller("myCntrl",function($scope){
        $scope.randomList=[]

        $scope.generateRandomNumbers=function(){
            $scope.randomList=[]
            for(var i=1;i<=$scope.num;i++)
            {

                $scope.randomList.push((Math.random()*$scope.num+1).toFixed(2
))
            }
        }
    });
    </script>
    </head>
    <body ng-app="myApp">
        <div ng-controller="myCntrl">
            Enter the Number of random numbers to be generated: <input
type="numbers" ng-model="num">
            <button ng-
click="generateRandomNumbers()">Generate</button><br/>
            <li ng-repeat="x in randomList">{{x}}</li>
        </div>
    </body>
</html>
```

Department of Computer Science & Engg., JCE

10.   Example on student List Object

```html
<!DOCTYPE html>

<html>
<title> Demo on List of Student Objects</title>

<head>
    <script type="text/javascript"
 src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
</script>

<script>

  var app=angular.module("studListApp",[]);

  app.controller("studListAppCntrl", function($scope){
     $scope.studList=[
        {'USN':'1BI20CS001','NAME':'ABC','DEPT':'CSE','SEM':7,'MARKS':78},
        {'USN':'1BI20EC002','NAME':'XYZ','DEPT':'ECE','SEM':6,'MARKS':89},
        {'USN':'1BI20EE003','NAME':'PQR','DEPT':'EEE','SEM':7,'MARKS':56},
        {'USN':'1BI20CS002','NAME':'LMN','DEPT':'CSE','SEM':7,'MARKS':90},
                ]
  });

</script>
</head>
<body ng-app="studListApp">

    <h1>Student List</h1>

    <div ng-controller="studListAppCntrl">

       <table border="1">
           <tr>
               <th>USN</th>
               <th>NAME</th>
               <th>DEPT</th>
               <th>SEM</th>
               <th>MARKS</th>
           </tr>
           <tr ng-repeat="student in studList">
               <td>{{student.USN}}</td>
               <td>{{student.NAME}}</td>
               <td>{{student.DEPT}}</td>
               <td>{{student.SEM}}</td>
               <td>{{student.MARKS}}</td>

           </tr>
       </table>

    </div>
</body>
</html>
```

Department of Computer Science & Engg., JCE

11. Example on ng-blur

```html
<!DOCTYPE html>
<html>
    <title>
        Demo on ng-blur directive
    </title>
    <head>
    <script type="text/javascript"
 src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
    </script>
    </head>
    <body ng-app="">
        Keep focus and keep losing focus from me to get the action done:
<input type="text" ng-model="name" ng-init="count=0"
 ng-blur="count=count+1">
        <br/>
        {{count}}
    </body>
</html>
```
